Account Profile skill

An AE types a company name and gets a sourced first draft of the **Account Profile** page of a GitLab account plan: the eight questions from GitLab's public Account Planning page, mapped to GitLab's four value drivers, with a dated source on every line. The AE reviews every line before any of it goes into the plan.

1. Company name
Plus optional public notes from the AE. Never CRM, contract, or customer platform data.

2. Public sources
10-K, 10-Q, 8-Ks, investor relations, technology job posts, GitLab customer stories.

3. Eight questions
Answered in handbook order. One claim per line, each cited. Inference marked "Read:".

4. Gaps and holds
"Not in public sources" instead of guesses. Conflicts held. Questions for the champion.

5. AE review
A checker script runs first. Then the AE keeps, edits, or cuts each line.

Every rule comes from a handbook page

Draft only the Account Profile, in the handbook's eight questions	Account Planning: the plan's four parts and the Account Profile questions
About the customer, no GitLab pitch	Account Planning: "all about the customer (not GitLab)"
At most two of the four named value drivers	Command of the Message: Customer Value Drivers
Filings first, then news and hiring	Sales Development: 10-Ks for "strategic priorities directly from leadership"
Gaps marked, ends with champion questions	Account Planning, Steps 2 and 6: close gaps with the team; verify with your champion
No personal names, even public ones	Data Classification: public personal data stays Orange
GitLab relationship only from public stories or the AE	Data Classification: contracts and non-public financials are Orange
Re-run quarterly, after big changes, and after model changes	Account Planning, Step 6: quarterly reviews; M&A and personnel changes
The AE reviews every line	Sales Development: agent output is "an action aid, not a replacement for rep judgment"

Full mapping with links: references/handbook-basis.md. All handbook pages accessed 2026-10-10.

From the Deere sample (page 3)

1. Goals and strategic initiatives

- The strategy is the Smart Industrial Operating Model, built on three pillars: production systems, technology stack, and lifecycle solutions. [S1]
- In December 2025 the company refined its Leap Ambitions, multi-year goals that emphasize automation, autonomy, digitalization, lifecycle solutions, and Solutions as a Service (SaaS). [S1]
- In March 2026 the board approved one-time senior officer stock awards tied to the refined Leap Ambitions, with a performance period running to October 27, 2030. [S7]

Value drivers most likely to matter

1. Deliver Better Products Faster: the strategy rests on software-heavy products, and the 10-K lists falling behind in new technologies as a strategic risk. [S1]
2. Reduce Security and Compliance Risk: the 10-K flags connected-product security, data privacy and AI rules, and the July 2026 FTC settlement adds compliance reporting. [S1, S2]

What's in this PDF

- **Pages 2-4:** three real runs on public companies. Lockheed Martin has a public GitLab customer story, so question 8 is filled from it. Deere and Capital One don't, so question 8 says "AE to fill from Salesforce."
- **Page 5:** a pilot plan for five field champions over four weeks, measured on Field Enablement's four levels.
- **Skill folder:** SKILL.md, references, the checker script, and the re-run checklist.

What's real and what's proposed

- **Real:** the skill, the three sample runs, their sources, and the checker results. Every sample line was checked against its source.
- **Proposed:** the pilot and its measures. No GitLab rep has used this, and no time savings are claimed.

Account Profile: Lockheed Martin Corporation (NYSE: LMT)

Snapshot: Global aerospace and defense technology company with four segments (Aeronautics, Missiles and Fire Control, Rotary and Mission Systems, Space). Fiscal 2025 sales of $75.0 billion, about 123,000 employees at December 31, 2025, fiscal year ends December 31. [S1]

1. Goals and strategic initiatives

- The stated goal is to deliver capability "quickly, at the needed quantities," while expanding production capacity to meet increased demand. [S1]
- Named initiatives: differentiating technologies, strategic partnerships (including with commercial companies), a multi-year business transformation initiative, fiscal discipline, and workforce. [S1]
- On July 6, 2026 it announced an agreement to buy Ultra Maritime for $3.45 billion; the company expects the deal to close in Q4 2026. [S2, S4]

Value drivers most likely to matter

1. Deliver Better Products Faster: speed is part of the stated goal, and the Q2 2026 release cites a counter-drone system taken from concept to live fire testing in 45 days. [S1, S3]
2. Reduce Security and Compliance Risk: it must protect controlled unclassified information under DFARS and submitted its initial CMMC certification in November 2025. [S1]

2. Macro factors

- 72% of fiscal 2025 sales came from the U.S. Government; the 10-K flags shutdowns, continuing resolutions and the debt ceiling as funding risks. [S1]
- As of the July 2026 10-Q, the FY 2027 defense topline request sought $1.5 trillion; the company notes it is subject to Congressional appropriation. [S2]
- Tariffs had an impact of about $485 million on fiscal 2025 cash flows, which the company expects to recover in substantial part over time. [S1]

3. Competitors and share

- The 10-K names Boeing, General Dynamics, L3Harris Technologies, Northrop Grumman and RTX as primary competitors. [S1]
- It also cites "new entrants, startups and non-traditional defense contractors," and says AI, digital engineering and autonomy are "enabling new factors of competition." [S1]
- Share plan: expand capacity, grow international sales (28% of fiscal 2025 sales), and add capability by acquisition. [S1, S4]

4. Biggest risks

- Short term: program execution. A classified Aeronautics program has about $1.8 billion of cumulative losses, and the Q2 2026 10-Q warns of possible further losses. [S2]
- Medium term: concentration. The F-35 program was 27% of fiscal 2025 sales. [S1]
- Long term: the 10-K warns that failing to implement its digital transformation "in a timely manner" could hurt results and competitiveness. [S1]

5. How IT supports or hinders the strategy

- The 10-K calls cybersecurity critical to "enabling our digital transformation efforts," with a CISO-led organization owning security strategy and threat response. [S1]
- Compliance load: DFARS controls for CUI, cyber rules flowed down to subcontractors, an initial CMMC submission (November 2025), and ISO 27001 certification. [S1]
- About 72,000 of its approximately 123,000 employees are engineers, scientists and IT professionals. [S1]

6. Digital transformation strategy

- The transformation initiative "seeks to significantly enhance our digital infrastructure" for efficiency and collaboration while reducing costs, and needs "substantial investment." [S1]
- The 10-K warns the business may suffer if it cannot integrate AI into internal processes and products in a "timely, cost-effective, compliant and responsible manner." [S1]
- **Read:** *the filings frame the transformation around efficiency and lower cost, while the company goal stresses speed, so a champion will need to say which one the budget is judged on. [S1, S3]*

7. How IT is perceived

- Not in public sources.
- Ask: Where do engineering leaders feel the business transformation program is helping software teams today, and where is it slowing them down?

8. Current GitLab relationship

- A public GitLab customer story (no publish date shown; it cites 2021 sales) lists GitLab Ultimate, about 64,000 projects, and 2,500 pipelines per minute through a common pipeline catalog. [S5]
- It says thousands of Jenkins instances were collapsed "down to mostly GitLab," including pipelines that run on disconnected networks. [S5]
- AE to fill from Salesforce: tenure, annual spend, current stage adoption, and known expansion areas.

Gaps to close with the account team

- Whether FY 2027 defense appropriations passed or the company is operating under a continuing resolution, since the fiscal year began October 1.
- Who owns the business transformation initiative and the software tooling budget.
- The GitLab story is undated and cites 2021 figures, so its numbers may be out of date.
- Current technology job posts were not reviewed; the careers search page did not load.

Questions to confirm with your champion

1. For the transformation program this year, does faster delivery or lower cost carry more weight with the budget owner?
2. How do CMMC and the split between classified and unclassified environments decide which tools teams may use?
3. Are the 64,000 projects and the common pipeline catalog in the GitLab story still accurate, and which programs sit outside them?
4. Will Ultra Maritime's engineering teams move onto the company's common software environment after close?

Held

- None.

S5 GitLab customer story: Lockheed Martin Undated about.gitlab.com/customers/lockheed-martin/

Account Profile: Deere & Company (NYSE: DE)

Snapshot: Makes agricultural, turf, construction, and forestry equipment and finances it through John Deere Financial. Fiscal 2025 (ended November 2, 2025): net sales and revenues of $45,684 million, net income attributable to Deere of $5,027 million, about 73,100 employees. [S1]

1. Goals and strategic initiatives

- The strategy is the Smart Industrial Operating Model, built on three pillars: production systems, technology stack, and lifecycle solutions. [S1]
- In December 2025 the company refined its Leap Ambitions, multi-year goals that emphasize automation, autonomy, digitalization, lifecycle solutions, and Solutions as a Service (SaaS). [S1]
- In March 2026 the board approved one-time senior officer stock awards tied to the refined Leap Ambitions, with a performance period running to October 27, 2030. [S7]
- **Read:** *software is now part of how Deere plans to grow, so how fast it ships digital products is a business issue, not only an IT one. [S1, S2]*

Value drivers most likely to matter

1. Deliver Better Products Faster: the strategy rests on software-heavy products, and the 10-K lists falling behind in new technologies as a strategic risk. [S1]
2. Reduce Security and Compliance Risk: the 10-K flags connected-product security, data privacy and AI rules, and the July 2026 FTC settlement adds compliance reporting. [S1, S2]

2. Macro factors

- Weak farm markets in fiscal 2025 meant lower sales volumes, more sales incentives, and higher receivable write-offs. [S1]
- Direct tariff costs were about $600 million in fiscal 2025 and $502 million in the first nine months of fiscal 2026, net of refunds after the February 20, 2026 Supreme Court ruling on IEEPA tariffs. [S1, S2]
- The company expects large ag to stay subdued in North America and soften in South America in 2026, with small ag and turf and construction and forestry improving. [S2]

3. Competitors and share

- Ag and turf: the 10-K names AGCO, CLAAS, CNH Industrial, Kubota, and Toro; construction and forestry rivals include Caterpillar, Komatsu, and Volvo Construction Equipment. [S1]
- The 10-K says ag is also drawing technology-focused companies and start-ups as competitors. [S1]
- To add technology, it bought Tenna, a construction mixed-fleet tracking company, in February 2026 for $439 million. Market share is not disclosed in the filings opened. [S2]

4. Biggest risks

- Short term: the bottom of the ag cycle. On August 20, 2026 the company raised its fiscal 2026 net income forecast to $4.75 billion to $5.00 billion, still below fiscal 2025, and said it expects 2026 to mark the bottom of the cycle. [S1, S3]
- Medium term: the December 2025 10-K reports slower than expected adoption of some precision technology and SaaS services; the August 2026 release cites increasing adoption. [S1, S3]
- Long term: the 10-K warns its business may suffer if it cannot integrate AI into processes, products, and services in a timely, compliant way. [S1]

5. How IT supports or hinders the strategy

- The John Deere Operations Center stores large data volumes at the edge and in cloud environments, and the 10-K calls reliance on third-party cloud systems a particular risk. [S1]
- In December 2025 the executive serving as CIO and President of John Deere Financial announced retirement effective January 31, 2026. As of the 10-K, the CISO reported to the CIO. [S1, S4]
- Job post hint: an August 10, 2026 senior software engineer post for a factory operations product asks the hire to integrate with enterprise platforms for data, identity, observability, and CI/CD. [S9]

6. Digital transformation strategy

- The technology stack pillar covers hardware, embedded software, connectivity, data platforms, and applications, shared across the enterprise. [S1]
- The December 2025 investor presentation shows 1M+ connected machines and about 500M engaged acres, with no as-of date on the slide. [S8]
- Inside the company, Deere uses generative AI in business processes and is adding AI-driven analytics and robotics to manufacturing. [S1]

7. How IT is perceived

- Not in public sources.
- Ask: Where do product and factory teams say central IT speeds up their software releases, and where does it slow them down?

8. Current GitLab relationship

- AE to fill from Salesforce. No Deere story appears on GitLab's public customer list as of 2026-10-10. [S10]

Gaps to close with the account team

- Who holds the CIO role after the retirement announced for January 31, 2026. The filings opened for this draft do not say. [S4]
- How software delivery is split across embedded machine software, Operations Center, and enterprise IT, and where Tenna fits.
- Finance leadership changed: a new CFO took office May 1, 2026. Learn whether technology budget approval changed. [S5, S6]
- Which cloud providers and software toolchain Deere uses. Not in public sources.

Questions to confirm with your champion

1. Is shipping software faster for Operations Center and machine features a leadership priority right now, or is the ag downturn putting cost first?
2. Who owns the enterprise CI/CD and platform teams, and who leads IT after the CIO retirement?
3. Does the FTC repair settlement create new software or reporting work for engineering teams?
4. Is the slow SaaS adoption the 10-K mentions seen inside as a product, delivery, or dealer problem?

Held

- None.

S10 GitLab customer stories, all customers list Undated about.gitlab.com/customers/all/

Account Profile: Capital One Financial Corporation (NYSE: COF)

Snapshot: Bank holding company and global payments provider: credit cards, consumer and commercial banking, and the Discover, PULSE and Diners Club networks. Fiscal 2025 total net revenue of $53.4 billion, about 76,300 employees at December 31, 2025, fiscal year ends December 31. [S1]

1. Goals and strategic initiatives

- Closed the Discover acquisition on May 18, 2025; the company says it lets it use Discover's networks, customers, technology and data to drive value for merchants, consumers and small businesses. [S1]
- Has substantially completed reissuing legacy Capital One debit cards onto the acquired network; network volume was $189.6 billion in Q2 2026. [S1, S2]
- Closed the Brex acquisition on April 7, 2026; at the January announcement the CEO said Brex accelerates its payments strategy, especially in business payments. [S4, S5]
- **Read:** *the next two years are about folding Discover and Brex into Capital One's own platforms, controls and cost base. [S1, S2, S5]*

Value drivers most likely to matter

1. Reduce Security and Compliance Risk: the 10-K says bringing Discover into its risk framework and compliance systems needs extensive investment and adds cyber risk until integration is done. [S1]
2. Accelerate Cloud Adoption & Transformation: outside the Discover integration, core IT is substantially on public cloud, but certain acquired Discover businesses still run partly in data centers. [S1, S6]

2. Macro factors

- The fiscal 2025 10-K lists tariffs and trade policy, geopolitical conflict, inflation and possible recessions as drivers of macro instability. [S1]
- The 10-K says compliance expectations and spending have risen, and Discover may require more investment in risk and compliance. [S1]

3. Competitors and share

- Largest U.S. credit card issuer by outstanding card loans at December 31, 2025. [S1]
- Cards compete with Visa and Mastercard issuers, American Express and private-label brands; banking competes with national and direct banks, credit unions and non-banks. [S1]
- With the acquired network it now competes with other payment networks, and the 10-K flags the risk that rivals adopt AI more quickly or more successfully. [S1]

4. Biggest risks

- Short term: Discover integration costs, $298 million in Q2 2026 and $2.1 billion since the deal was announced, as of June 30, 2026. [S2, S3]
- Medium term: the 10-K warns it may not realize the expected revenue and cost synergies from Discover, or may realize them later. [S1]
- Long term: the 10-K warns that failing to invest successfully in digital and technology developments could hurt results. [S1]

5. How IT supports or hinders the strategy

- Supports: outside the Discover integration, core IT and customer-facing apps are substantially migrated to third-party cloud, principally AWS. [S1]
- Hinders: certain acquired Discover businesses, including the payment network, are processed through a mix of data centers and third-party vendors. [S1]
- Hinders: the 10-K lists outages from integrating systems "such as our third-party cloud infrastructure platforms or mainframes" as a deal risk. [S1]
- Hinders: the 10-K says many of its data management, modeling and AI processes are manual. [S1]

6. Digital transformation strategy

- The 10-K says a key strategic focus is efficient, flexible systems such as cloud and AI, to cut costs and improve quality and security. [S1]
- The company calls itself "the only major U.S. bank to migrate entirely to the public cloud." [S4]
- The 10-K names pricing, fraud detection and software development among processes where it uses or may use models and AI, and expects its use of generative AI to increase. [S1]

7. How IT is perceived

- Not in public sources.
- Ask: When a change has to ship across both the Capital One and Discover systems, what slows it down most?

8. Current GitLab relationship

- No Capital One story on GitLab's public customer stories page as of 2026-10-10. [S7] AE to fill from Salesforce.

Gaps to close with the account team

- Which Discover systems, including the payment network, are planned to move off data centers, and when.
- How engineering teams build, secure and ship software today, and who owns the developer platform.
- Who owns the Discover and Brex technology integration and its budget.

Questions to confirm with your champion

1. Is moving Discover workloads onto Capital One's cloud platform a funded priority for the next 12 months?
2. Does producing control and compliance evidence for the Discover integration slow engineering teams down today?
3. How are Brex's engineers being brought onto Capital One's tools and controls?
4. Is AI-assisted software development in pilot, in wide use, or waiting on risk review?

Held

- The company says it is the only major U.S. bank to migrate entirely to the public cloud and closed its last data center in 2021 [S4, S6] vs the 10-K says certain acquired Discover businesses, including the payment network, are processed through a combination of data centers and third-party vendors [S1]. Both can be true if the cloud claim covers only legacy Capital One; confirm with the champion.

Five field champions, four weeks

The question: does a sourced first draft of the Account Profile get used in real account plans, and is it accurate enough that AEs trust it after checking it?

Who

- **Five champions:** three AEs from different segments, one Solutions Architect, one CSM. The handbook asks AEs to build plans with their SA and CSM.
- **Time:** about two hours a week each, agreed with their manager.
- **Accounts:** up to three strategic accounts each, matching the handbook's "up to three account plans at one time." Up to 15 profiles.

Schedule

Week	What happens
0	30-minute kickoff. Load the skill in Claude. Each champion runs one profile live and logs what they'd change.
1-3	Champions use the drafts in real account plans, QBR prep, or AE-SA-CSM account calls. 20-minute check-in each week.
4	Readout: the measures, the error log, and a go, fix, or stop call.

Decision at week 4

- **Go wider** if at least 10 of 15 profiles were used in real account work, the average rating is 4 or higher, and no profile had an uncited or invented line.
- **Fix and re-run** if usage is good but errors show a pattern. Change the skill, re-run the three samples, continue.
- **Stop** if champions didn't use the drafts. That answer is worth having early.

What this pilot does not test

- Relationship mapping, whitespace mapping, or the action plan.
- Paid data sources or CRM connectors.
- Whether better profiles lead to more pipeline. That needs a longer window and a comparison group.

What's already been tested

- Three runs on public companies, each checked line by line against its sources. The checks found 21 lines to fix out of about 140, mostly wording that went past the source or left out context. None was an invented fact.
- All three first drafts ran long, so the skill now sets a length limit and the checker flags drafts over one page.
- A blind re-run of one company on a second model chose the same two value drivers and held the same gaps.

Measures: Field Enablement's four levels

Level	What we track
1. Engagement	Profiles run per champion; how many reached AE review
2. Sentiment	After each profile: "Would you start your next account plan from this draft?" (1-5), plus one line on what changed
3. Behavior	Profiles used in a real plan, QBR deck, or account call. Share of lines kept, edited, or deleted. Champion questions actually asked
4. Outcome	Self-reported prep time, before and after. A hypothesis only; pipeline effects need a longer window

Accuracy, tracked separately: every wrong line goes in an error log by type (wrong, stale, unsupported read, missed) and is checked against its cited source.

Data rules

- **Green inputs only:** public filings, news, company sites, public GitLab customer stories.
- **No personal names.** Public personal data is still Orange.
- **No Salesforce exports, contracts, or spend** in the skill. The AE fills question 8 in the plan itself.
- **Never Red data:** nothing from inside a customer's GitLab instance.
- **No new tools or connectors** during the pilot. Adding one starts a TPRM review.

Feedback and model changes

- One GitLab issue per profile from a short template, the way Sales Development already collects agent feedback.
- After a model change, re-run the three samples and the re-run checklist before champions use the new version.

Sources: GitLab handbook pages Account Planning, Field Enablement (How We Measure Success), Data Classification Standard, Sales Development, Third Party Risk Management. Accessed 2026-10-10.
